AIH – AlHydrogel; aluminium oxyhydroxide
 ADJ – AdjuPhos; aluminium hydroxyphosphate
 AAHS – amorphous aluminium hydroxy sulphate

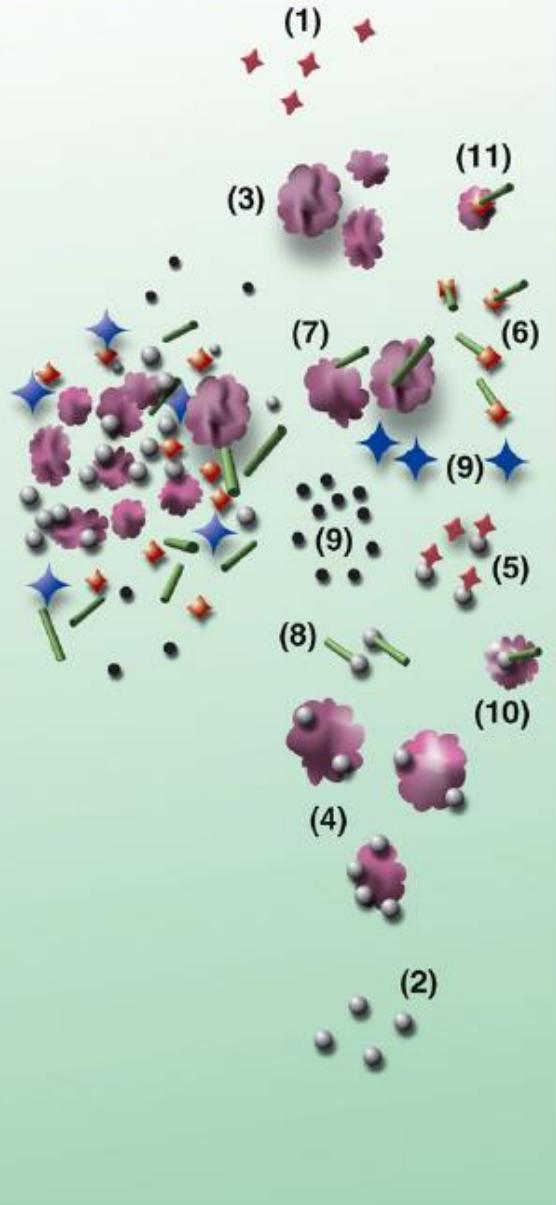

Concentration Range at Injection Site?

0.13 mg/0.5mL (Prevenar 13) is equivalent to 260 mg/L or 9.63 mmol/L

0.85 mg/0.5mL (Pediarix) is equivalent to 1700 mg/L or 62.96 mmol/L

Aluminium Adjuvant Reference Range
9.63 – 62.96 mmol/L

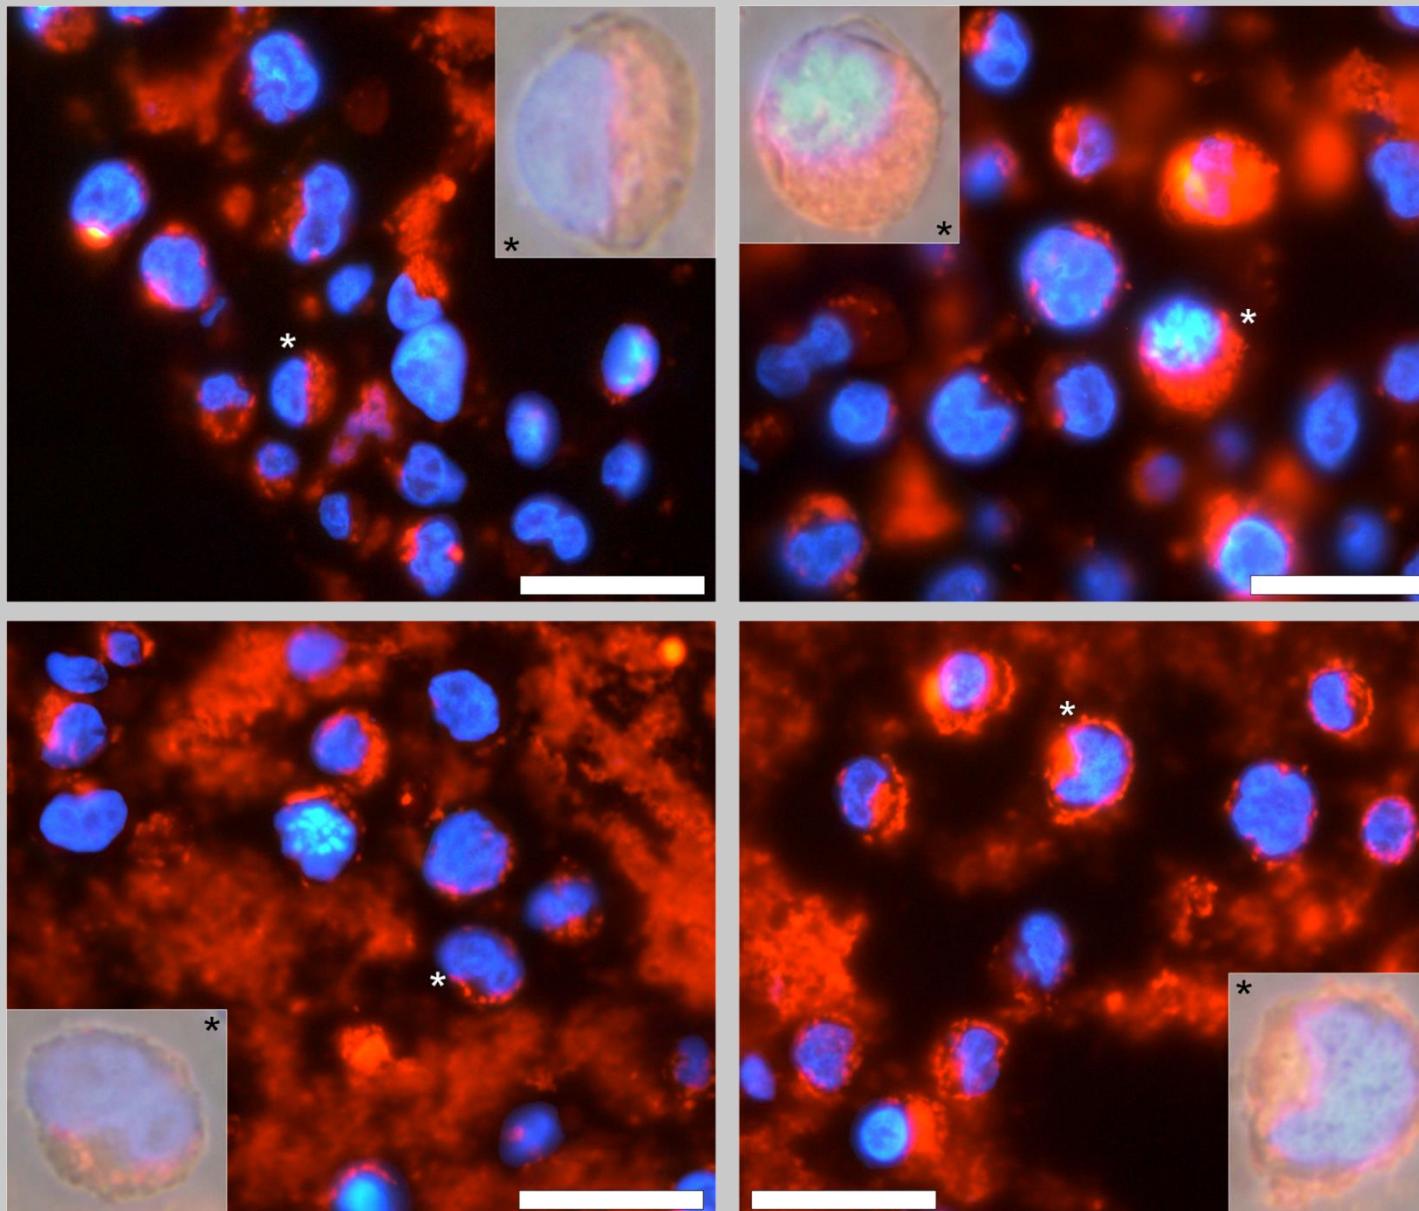

(a)

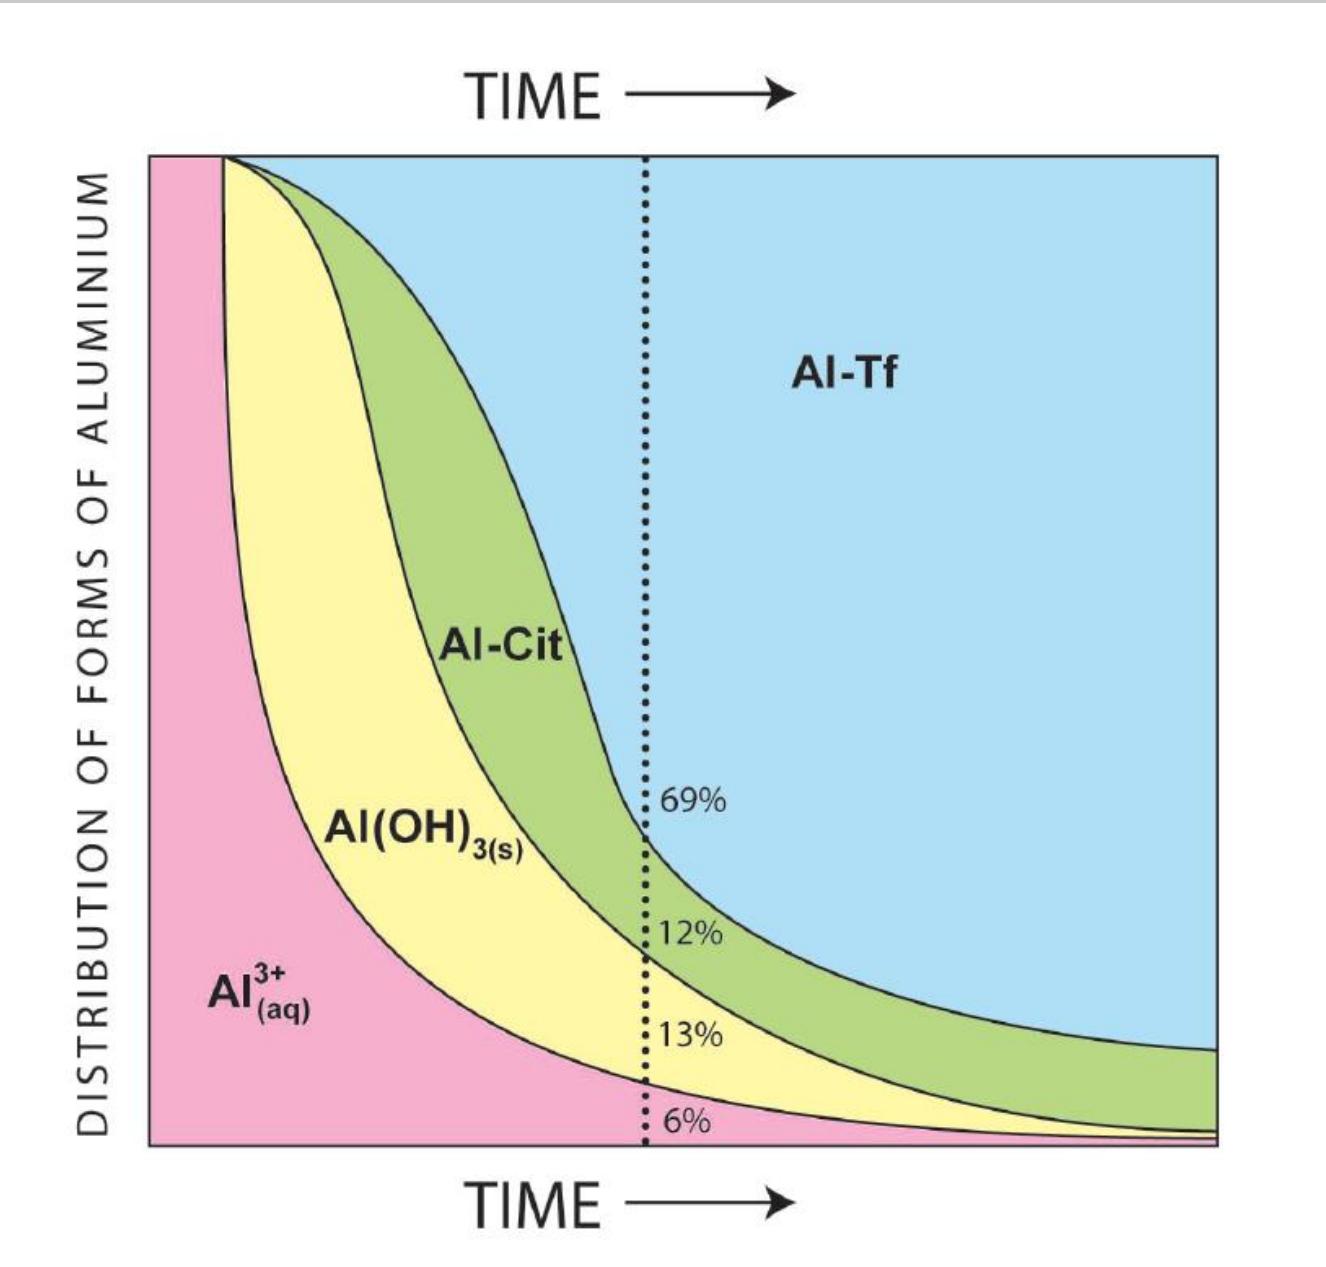

The Critical Environment of the Injection Site

(1) $\text{Al}^{3+}_{(\text{aq})}$; (2) free antigen (AG); (3) particulate adjuvant (ADJ); (4) ADJ with associated AG; (5) AG-Al complex; (6) MIF ligand-Al complex; (7) ADJ with associated MIF ligand; (8) MIF ligand-AG complex; (9) particulate iron (as contaminant of adjuvant) either free or with adsorbed Al/AG and resultant reactive oxygen species (ROS); (10) ADJ with associated MIF ligand-AG complex; (11) ADJ with associated MIF ligand-Al complex. MIF ligands might include biomolecules such as; ATP, albumin, transferrin, citrate, fibrinogen.

So What Might The Injection Site Look Like Following Infiltration By Immune-Reactive Cells? (What's All That Red Stuff?)
